

Navy Blue Theme — Portfolio

Code Explanation Guide

Nandini V · HTML & CSS · Deep Navy Blue Edition

This guide explains every section of your Navy Blue portfolio — what changed from the original warm theme, why each CSS decision was made, and how to further customise the design.

00 — Table of Contents

#	Section	Topic
01	What Changed	Original warm vs Navy Blue — all colour swaps
02	CSS Variables	New navy colour token system (:root)
03	Body & Background	Deep navy page background explained
04	Navigation Bar	Frosted-glass nav on dark background
05	Hero Section	Two-column layout, stat cards, NV monogram
06	Experience Section	Row grid, hover tint, muted text colours
07	Skills Section	Card grid, accent tags, hover lift effect
08	Projects Section	Cards, left-accent border, ghost numbers
09	Certifications	Icon cards with navy card background
10	Education Section	Darkest-navy highlight block
11	Contact & Footer	Email link, social links, footer strip
12	Animations	fadeUp keyframe, stagger, hover transitions
13	Responsive Design	Mobile media query at 900px
14	Customisation Guide	How to swap colours, fonts and content

01 — What Changed — Original vs Navy

The original portfolio used a warm editorial palette (cream, rust, gold on off-white). The Navy Blue edition replaces every warm tone with a cool deep-blue system while keeping the same HTML structure completely unchanged.

Colour mapping — old to new:

Role	Original (Warm)	Navy Blue (New)
Page background	#faf7f2 off-white	#0a192f deep navy
Alternate section bg	#f5f0e8 cream	#112240 mid-navy

Primary accent	#c0522a rust red	#64b5f6 sky blue
Secondary accent	#c8962e gold	#90caf9 light blue
Tag / code colour	#4a6b5a sage green	#80cbc4 teal
Main text	#0f0e0d near-black	#e8edf5 near-white
Borders / dividers	#d8cfc0 warm grey	#1e3a5f dark blue
Card backgrounds	ffffff white	#112240 mid-navy
Education section bg	#0f0e0d ink dark	#050e1a darkest navy
Footer background	#0f0e0d ink dark	#050e1a darkest navy
Nav background	rgba(245,240,232,0.88)	rgba(10,25,47,0.92)
Muted body text	#5a5248 / #6a6058	#8aaac8 steel blue
Subtle muted	#9a9088 / #8a7f72	#5a8ab0 dark steel

02 — CSS Variables — The Colour Token System

All colours are declared once in the `:root { }` block as CSS custom properties. Every element references these variables, so one edit updates the entire site.

The new `:root` block:

```
:root { --ink: #e8edf5; /* main text — light on dark */ --cream: #112240; /* alternate
section background */ --rust: #64b5f6; /* primary accent — sky blue */ --gold: #90caf9; /*
secondary accent — light blue */ --sage: #80cbc4; /* tag / code colour — teal */ --light:
#0a192f; /* main page background */ --border: #1e3a5f; /* dividers and card borders */ }
```

The variable names (`--rust`, `--cream`) stayed the same — only values changed. This is why the whole theme swapped with minimal edits: all CSS already used `var(--rust)`, `var(--cream)`, etc.

Variable	Value	What it colours
<code>--ink</code>	<code>#e8edf5</code>	All body text, headings, nav links
<code>--cream</code>	<code>#112240</code>	Alternate section backgrounds, tag backgrounds
<code>--rust</code>	<code>#64b5f6</code>	Accent headings, buttons, borders, icons
<code>--gold</code>	<code>#90caf9</code>	Secondary labels, italic role text, year
<code>--sage</code>	<code>#80cbc4</code>	Stack tags on project cards
<code>--light</code>	<code>#0a192f</code>	Main page background (body)
<code>--border</code>	<code>#1e3a5f</code>	Card borders, section dividers, nav border

03 — Body & Page Background

The body element sets the overall page colour via `--light` (`#0a192f`). Text colour is `--ink` (`#e8edf5`) — a near-white that reads comfortably on dark backgrounds. Alternate sections use `var(--cream) = #112240`, a slightly lighter navy for subtle visual rhythm.

```
body { background: var(--light); /* #0a192f deep navy */ color: var(--ink); /* #e8edf5 near-white */ } section:nth-child(even) { background: var(--cream); } /* #112240 */
```

04 — Navigation Bar

The nav bar is position: fixed so it stays visible while scrolling. The background rgba(10,25,47,0.92) is 92% opacity navy, combined with backdrop-filter: blur(12px) for a frosted-glass effect over the dark page.

```
nav { position: fixed; top: 0; width: 100%; z-index: 100; background: rgba(10,25,47,0.92); backdrop-filter: blur(12px); border-bottom: 1px solid var(--border); /* #1e3a5f */ }
```

Logo uses var(--rust) = sky blue. Nav links use var(--ink) near-white and transition to var(--rust) on hover over 0.2s.

05 — Hero Section

The hero uses display: grid; grid-template-columns: 1fr 1fr — left side has the name, role, bio, and buttons; right side has four stat cards with a giant NV monogram behind them.

Element	Style in Navy Theme
Hero tag line	Small uppercase in var(--rust) sky blue with a 40px line before it
Name h1	Playfair Display 6rem bold; italic "V." in var(--rust) sky blue
Role text	Playfair Display italic in var(--gold) = #90caf9 light blue
Bio text	DM Sans 0.97rem in #8aaac8 muted steel blue
Primary button	Background var(--rust) sky blue with white text
Outline button	Border var(--border) dark blue; hover to var(--rust)
Stat cards	Background #112240 mid-navy; stat number in var(--rust)
Stat label	Colour #7a9cc0 muted blue
NV monogram	::before pseudo-element, rgba(100,181,246,0.06) ghost blue

06 — Experience Section

Each internship row is a CSS Grid with columns 200px (meta) and 1fr (content). Rows are separated by a 1px var(--border) top border.

```
.exp-item { display: grid; grid-template-columns: 200px 1fr; border-top: 1px solid var(--border); } .exp-item:hover { background: rgba(100,181,246,0.05); /* cool blue tint */ }
```

Hover tint changed from warm rgba(192,82,42,0.03) rust to cool rgba(100,181,246,0.05) blue. Company name uses var(--rust), description text uses #8aaac8, period text uses #5a8ab0.

07 — Skills Section

Six skill-group cards in a 3-column CSS Grid. Card backgrounds are #112240 (mid-navy). Hover lifts the card 4px and adds a dark box-shadow.

```
.skill-group { background: #112240; border: 1px solid var(--border); transition: transform 0.2s, box-shadow 0.2s; } .skill-group:hover { transform: translateY(-4px); box-shadow: 0 12px 40px rgba(0,0,0,0.3); }
```

Default tags use var(--cream) background with var(--ink) text. Accent tags (Python, Java, SQL, Power BI) use var(--rust) = sky blue background with white text.

08 — Projects Section

Two project cards in a 2-column grid. Background #112240. Each card has a 4px left accent border via a ::after pseudo-element in var(--rust) sky blue.

```
.project-card { background: #112240; } .project-card::after { content: ""; position: absolute; top: 0; left: 0; width: 4px; height: 100%; background: var(--rust); /* sky blue */ }
```

Ghost project number (01, 02) changed from rgba(192,82,42,0.08) warm rust to rgba(100,181,246,0.10) cool blue glow. Description text: #8aaac8. Stack tags: var(--sage) teal.

09 — Certifications Section

Three cards in a 3-column grid with background: #112240. On hover the border transitions to var(--rust) sky blue. The square icon block keeps var(--rust) fill with white text. Organisation text uses #5a8ab0 dark steel.

10 — Education Section

Uses the darkest navy #050e1a as background — one step darker than the main page — to make it a distinct "feature" section. Text stays var(--ink) near-white.

```
#education { background: #050e1a; /* darkest navy */ color: var(--ink); /* #e8edf5 near-white */ } #education .section-line { background: rgba(100,181,246,0.2); /* faint blue divider */ } .edu-card { border: 1px solid rgba(100,181,246,0.15); }
```

School name uses rgba(100,181,246,0.6) — semi-transparent sky blue for a soft muted look. Year text uses var(--gold) = #90caf9. The BE badge uses var(--rust) = #64b5f6.

11 — Contact & Footer

The contact section is centred. Email is an href="mailto:" link styled as a large Playfair Display heading in var(--rust) sky blue with a matching 2px bottom border.

```
.contact-email { color: var(--rust); /* sky blue */ border-bottom: 2px solid var(--rust); } .contact-link { color: #5a8ab0; } /* dark steel */ .contact-link:hover { color: var(--rust); } footer { background: #050e1a; color: rgba(100,181,246,0.4); /* faint blue copyright */ }
```

12 — Animations & Transitions

Animations are unchanged from the original — keyframes are colour-independent. The same fadeUp animation runs on hero elements and stat cards.

```
@keyframes fadeUp { from { opacity: 0; transform: translateY(24px); } to { opacity: 1; transform: translateY(0); } }
```

Element	Animation / Transition Detail
Hero left column	fadeUp 0.9s ease — slides up on page load
Stat cards	fadeUp with 0s / 0.1s / 0.2s / 0.3s stagger delays
Nav links	color transition 0.2s ease on hover
Primary button	background darken + translateY(-2px) on hover
Skill cards	translateY(-4px) + box-shadow on hover in 0.2s
Project cards	translateY(-6px) + heavier box-shadow on hover in 0.25s
Cert cards	border-color to var(--rust) sky blue on hover in 0.2s
Experience rows	rgba(100,181,246,0.05) blue tint on hover in 0.2s

13 — Responsive Design

A single @media (max-width: 900px) block handles all mobile changes. Colours are unaffected — only layout and padding adjust.

Element	Desktop	Mobile under 900px
Hero	2-column grid	1 column; right panel hidden
Nav links	Visible	Hidden (display: none)
Skills / Certs	3-column grid	1 column stacked
Projects	2-column grid	1 column stacked
Experience rows	200px + 1fr	1 column stacked
Education card	auto + 1fr + auto	1 column stacked
Section padding	6rem 5rem	4rem 1.5rem

14 — Customisation Guide

Change the accent colour (sky blue to any colour):

Find --rust: #64b5f6 in :root and replace #64b5f6 with your chosen hex. This updates buttons, borders, icons, and headings everywhere at once.

Swap to a different dark theme (e.g. dark green):

```
--light: #0a1f0d; /* dark forest green background */ --cream: #122a15; /* slightly lighter green */ --rust: #81c784; /* soft green accent */ --border: #1e4a22; /* dark green borders */
```

Add a new project card:

Copy any .project-card div inside #projects, paste it after the last card, and update the title, description, and stack tags. The 2-column grid accommodates it automatically.

Add a new skill group:

Copy any .skill-group div inside .skills-layout and update the emoji icon, title, and tags. With 7+ groups the 3-column grid wraps to a new row automatically.

Change the fonts:

Two fonts load from Google Fonts: Playfair Display (headings) and DM Sans (body). Replace both names in the Google Fonts link tag and the font-family CSS declarations to switch fonts globally.
